Remark:

- ①The air volume, electric characteristic and noise are specified at the static pressure of 0 Pa.
- ②The values of noise level is A weighted average sound pressure level, the mean value are measured by our company, within +3 and -7 to tolerance.
- ③The values of noise level are measured at 1m away from the left side/right sidee/bottom of the sample respectively.and the calculate the average value.
- ④The values of air volume are the mid-points of results measures by our company, within ±10% tolerance.
- ⑤Static pressure is the central value of the company's test results when the air volume is 0,with a lower deviation of -10%.
